

New in Microsoft Exchange Server 2010

Feature	Description
Multiple-browser support	OWA (Outlook Web Access) support for IE 7 and 8, Firefox 3, and Safari 3
Reply/forward status	Reply/forward status maintained by server, displayed by all clients
MailTips	Warn about large distributions, out-of-office recipients, etc.
Conversation view	Message threading; reduces mailbox clutter
Calendar sharing	Calendar sharing extended to OWA, federated users
Contact sharing	Extend shared contacts beyond organization and desktop
Voice Mail Preview	Automatically transcribed text-based preview of voice mail messages
Call Answering Rules	Incoming phone calls managed like incoming e-mails
Rights-management in OWA	Read and create IRM-protected messages natively in OWA as well as Outlook
Federation	Trust Exchange servers of partner organizations, share calendars, presence
Page patching	Automatic repair of corrupted database pages from copies
I/O optimization	I/O bursts reduced, allowing use of SATA (desktop) disk drives
JBOD support	Replicated mailbox databases allow use of JBOD (concatenated disks) instead of RAID arrays
Database availability groups	Redundant copies of mailbox databases with continuous replication, automatic recovery
Database-level failover	Removes need for clustering, improves overall uptime
Online Move Mailbox	Mailboxes can be moved during normal business hours with user online
Transport protection rules	Allow an administrator to automatically apply IRM protection to e-mail after sending

Moderation	Re-direct mail to a manager or trusted moderator for review, as a transport rule
Outlook protection rules	Automatically triggers Outlook to apply an RMS template to a message before it is sent
Role-Based Access Control	Delegation of specific authorities simplifies administration
Exchange Control Panel (ECP)	User self-service for tasks that used to require administrators
Message tracking	Users can track message delivery without a help-desk call
Distribution group management	Users can create, manage, and moderate distribution groups
Mobile Device Block/Allow List	Administrators can select which devices can sync data
Protected voice mail	Prevent voice mails from being forwarded outside the organization
Personal Archive	Move PST files to a secondary Exchange mailbox for performance and compliance
Multimailbox search	Cross-mailbox search user interface for HR, compliance; does not require administrator
